

## **Incident Response and Monitoring Policy**

**Purpose:** To establish guidelines for detecting and responding to security incidents within the web application.

**Scope:** Covers all potential security incidents related to unauthorized access attempts, phishing attacks, and suspicious activities detected within the LECO network.

**Policy:**

- The application must log security-related events such as failed login attempts, unauthorized access attempts, and unusual activity.
- Security incidents should be reported to administrators immediately for further investigation.
- Real-time monitoring tools should be integrated to detect any suspicious activities and trigger appropriate responses.

**Compliance:** Regular reports and reviews of incident logs must be conducted to ensure effective monitoring and timely response to security incidents.
